## 24/7 Recovery & Restoration

With a safe backup solution, you will have a certified, dedicated IT professional oversee your cloud-managed backup, making sure your network is secure and monitoring any possible threats to your data security. In the rare event your data is lost or compromised, our team will assist with recovering lost files and restore your records.

## Tailored to Your Business Needs

With scalable tiers and up to a terabyte of storage, we offer customizable solutions to match specific back up needs.

## Scheduled Backups

Our back up solution is customizable to include the frequency at which you automatically back your data up. Typical businesses utilize a nightly backup, but depending on your needs, we can provide back ups as frequently as necessary.

## End-to-End Encryption and Transparency

Our back up solutions stand out from the competition so you know exactly where your data is being stored and who is helping you store it. Additionally, your data is encrypted with cipher keys and AES encryption to ensure only you can access your data at any time. Nobody outside of your jurisdiction will ever be able to see what you have backed up, providing peace of mind that your confidential information is 100% secure.

## Dedicated Backup Support

Industry-leading customer support comes standard with all of our managed services. Our certified IT experts will be there 24/7/365 to ensure you have everything you need to succeed. It starts from the moment you consider our services with a discovery meeting to help customize everything from storage size to backup frequency to match your specific needs.

In the event of a data loss, we are here to support you through every step to recover your lost data.

## Local Backup

Your data never leaves our community and is never stored in a data farm. We protect your information in multiple locations so you never have to wonder where your data is or if it's being farmed for information.

## Secure and Redundant

Our safe backup protects your data with firewalls, AES encryption, and encryption keys to ensure only you can access your data. Our redundant network refers to the multiple locations your information is stored in so in the event of a disaster, your data is guaranteed to be safe, giving you complete security over digital and physical threats.
