What we offer for your business

You rely on your servers to be constantly available while running at a high level of performance and keeping your data secure. Let Mosaic's team of IT Professionals ensure that your critical technology assets, and the data they host, are fully optimized and updated. We monitor, manage, and optimize performance in the background, while providing you feedback on any conditions that may impact your business.

Managed Server - For your business

- ✓ Server Set Up and Deployment
- ✓ Server OS Installation and Configuration
- ✓ Regular Server Maintenance
- ✓ Server Performance Monitoring
- ✓ OS Hardening and Patching
- ✓ Network Service
- ✓ Malware Protection
- ✓ System Backup
- ✓ Availability and Uptime
- ✓ 24/7 Local Support
- ✓ Dedicated IT Team
- ✓ Industry Standard Compliant

Advanced Performance Monitoring

Performance monitoring allows real-time insight into the health of your server. By tracking CPU utilization, memory availability, disk usage, and other key performance metrics, Mosaic's certified IT technicians can help you make the most of your technology investment.

Key Application Maintenance

Regular server maintenance will keep your devices operating at peak performance and alert you to potential issues before they become real problems. This process will install new updates, check the server's physical state, verify hard disk integrity, review data backups, confirm event monitoring, perform security checks, and more.

Configuration Management

Utilize configuration management to keep small or large changes consistent throughout your organization and avoid misconfigurations. These misconfigurations were identified as a leading cause of security incidents. Maximize uptime and have the ability to scale your system for future growth.

- ✓ Constant Software Upkeep
- ✓ Consistent Configuration Across All Devices
- ✓ Stay Up To Date With Changes Over Time

Automated Operating System Updates

This combines real-time continuous monitoring and endpoint data analysis with automatic defensive responses that allow you to effectively secure your network without the constant upkeep. Take your business to the next level by upgrading your current cyber security.

Real Time Server Optimization

Real Time Server Optimization allows Mosaic's IT Team to monitor your devices and respond the any situations that may impact performance. We constantly analyze CPU, memory, and disk utilization: services and applications: policy and traffic to ensure consistently reliable performance.

Scheduled Preventative Maintenance

With Mosaic's managed server solution, you keep your server software updated and running so that your computer network can operate smoothly and avoid a total or partial network failure.

- ✓ Scan Server Log Files
- ✓ Comprehensive Back Ups
- ✓ Assess Hard Disk Space
- ✓ Examine Security Features and Employ Software Patches
